NurseMate® ASAP is effective, convenient and easy to use. It helps newborn pigs by:

- Initiating quick and vigorous feeding from even the smallest pigs
- Improving weaning weight and allows for weaning of more uniform pigs
- Improving resistance to infection

Small pigs in each litter need a little help. NurseMate provides the help they need. One dose contains many of the same bioactive proteins as the sow’s colostrum. This enables the smaller pigs to nurse more quickly and aggressively. NurseMate ASAP has been formulated to fit the needs of the bottom 20% of pigs born.

A 120 ml pump bottle contains sixty 2 ml doses and can be administered to the smallest pigs in each litter. Just pump twice into the newborn pig’s mouth.
Swine producers face a constant struggle to reduce losses due to nutrition or disease.

A study done on E. coli in piglets showed bovine colostrum was just as effective as sow colostrum in conferring resistance on the piglets. Bovine colostrum has also been shown to reduce the incidence of diarrhea in pigs infected with E. coli 0111:NM and rotavirus.

South Dakota State University demonstrated that colostral whey concentrate:

- Blocks the action of bacterial toxins
- Promotes anabolic action of cells in culture
- Blocks the infection by enteric viruses in culture
- Reduces inflammation induced by E. coli 0111:NM
- Kills the O157 E. coli involved in food-borne outbreaks
- Generally enhances the immune response of infected pigs
- Blocks the immunosupression induced by E. coli 0111:NM in germ-free piglets
- Inhibits the growth of pathogenic E. coli, Salmonella, and Campylobacter bacteria in culture
